WIREFRAMES

MVP

- Die holding "Gradient Matrix"
- Name Input
- Winning Logic
- Game initializer
- Color Scrambler
(this rearranges the
dies into a new order
for the user to re-
arrange)

Landing Page

This input is where the user will be putting their name in

Post MVP

- Algorithm that creates a target "Gradient Matrix"
- Algorithm that creates the gradients for me.

SCREENSHOTS

SWAP();

- ▶ jQuery wraps elements from the DOM. Making it easier to select elements from the HTML.
- ▶ `$('#div')`
- ▶ EASIER THAN:
- ▶ `.getElementByTagName('div')`
- ▶ On line JS:58 I compare `$(this)[0] == sq[0]` gives us the comparison of the inside of these wrappers.
- ▶ Comparing `$(this) == sq` will always return false because it compares it's wrappers.

```
function swap(){  
  if (x === true){  
    sq1 = $(this);  
    sq1Prev = sq1.prev();  
    sq1.addClass('selected');  
    return x = false;  
  }else if (($[this][0] == sq1[0])&&(x === false)){  
    sq1.removeClass('selected');  
    return x = true;  
  }  
  else{  
    sq2 = $(this);  
    sq2Prev = sq2.prev();  
    sq1.insertAfter(sq2Prev);  
    sq2.insertAfter(sq1Prev);  
    sq1.removeClass('selected');  
    console.log(winner());  
    return x = true;  
  }  
}
```
